ASPIDISTRA ELATIOR

Greenex proudly represents the **TAK**, the leading producer of **Aspidistra elatior**.

Aspidistra elatior is a popular foliage plant, originally from southeast Asia, now cultivated worldwide.

Commonly named '**Cast Iron Plant**', it lives up to this expectation. Due to its rhizomorphic roots, it's highly tolerant of stress indoors and outdoors.

Pot sizes range from 15-45 cm / 6-18", this variety works great as an accent, centerpiece, patio plant, or for landscaping in warmer USA (Gulf State) zones.

Foliage ranges from light to dark green. Highly tolerant of full-sun and shade. Leaves will grow up to 3' (90 cm) long, given the right conditions and space to stretch. Flowers at ground level, predominantly sold as a long-lasting and robust foliage plant, similar to Sansevieria.

12 CM / 5" POT – 10 STEMS – SIZE 35-41 CM / 14-16.5"

SIZING OF BARE-ROOTED CUTTINGS
